## Construction

1. In the given figure, XZ is parallel to BC.  $AZ=3\mathrm{cm},\ ZC=2\mathrm{cm},\ BM=3\mathrm{cm}$  and  $MC=5\mathrm{cm}.$  Find the length of XY.

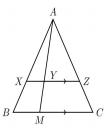

Figure 1: Isosceles Triangle

2. In the given figure,  $DE \mid\mid BC$ . If AD=2units, DB=AE=3units and EC=xunits, then find the value of x is:

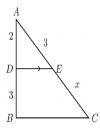

Figure 2: Right Angle Triangle

- (a) 2
- (b) 3
- (c) 5
- (d)  $\frac{9}{2}$

3. In the given figure,  $\triangle ABC$  and  $\triangle DBC$  are on te same base BC. If AD intersects BC at O, prove that  $\frac{ar(\triangle ABC)}{ar(\triangle DBC)} = \frac{AO}{DO}$ .

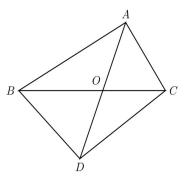

Figure 3: Triangles with same base

## Linear

- 4. **Assertion (A):** Point **P**(0,2) is the point of intersection of y axis with the line 3x + 2y = 4.
  - **Reason (R):** The distance of point P(0,2) from x axis is 2 units.
- 5. If the pair of equations 3x y + 8 = 0 and 6x ry + 16 = 0 represent coincident lines, then the value of 'r' is:
  - (a)  $-\frac{1}{2}$
  - (b)  $\frac{1}{2}$
  - (c) -2
  - (d) 2
- 6. The of linear equations 2x = 5y + 6 and 15y = 6x 18 represents two lines which are:
  - (a) intersecting
  - (b) parallel
  - (c) coincident
  - (d) either intersecting or parallel
- 7. Find the equations of the diagonals of the parallelogram **PQRS** whose vertices are P(4,2,-6), Q(5,-3,1), R(12,4,5) and S(11,9,-2). Use these equations to find the point of intersection of diagonals.
- 8. A line l passes through point (-1,3,-2) and is perpendicular to both the lines  $\frac{x}{1} = \frac{y}{2} = \frac{z}{3}$  and  $\frac{x+2}{-3} = \frac{y-1}{2} = \frac{z+1}{5}$ . Find the ctor equation of the line l. Hence, obtain its distance from origin.
