Construction

1. In the given figure, XZ is parallel to BC. $AZ=3\mathrm{cm},\ ZC=2\mathrm{cm},\ BM=3\mathrm{cm}$ and $MC=5\mathrm{cm}.$ Find the length of XY.

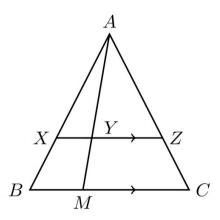

Figure 1: Isosceles Triangle

- 2. In the given figure, $DE \mid\mid BC$. If AD=2units, DB=AE=3units and EC=xunits, then find the value of x is:
 - (a) 2
 - (b) 3
 - (c) 5
 - (d) $\frac{9}{2}$

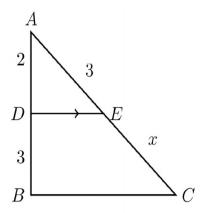

Figure 2: Right Angle Triangle

3. In the given figure, $\triangle ABC$ and $\triangle DBC$ are on te same base BC. If AD intersects BC at \mathbf{O} , prove that $\frac{ar(\triangle ABC)}{ar(\triangle DBC)} = \frac{AO}{DO}$.

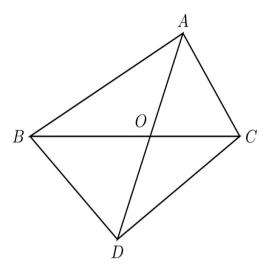

Figure 3: Triangles with same base

Linear

- 4. **Assertion (A):** Point **P**(0,2) is the point of intersection of y axis with the line 3x + 2y = 4.
 - **Reason (R):** The distance of point P(0,2) from x axis is 2 units.
- 5. If the pair of equations 3x y + 8 = 0 and 6x ry + 16 = 0 represent coincident lines, then the value of 'r' is:
 - (a) $-\frac{1}{2}$
 - (b) $\frac{1}{2}$
 - (c) -2
 - (d) 2
- 6. The of linear equations 2x = 5y + 6 and 15y = 6x 18 represents two lines which are:
 - (a) intersecting
 - (b) parallel
 - (c) coincident
 - (d) either intersecting or parallel
- 7. Find the equations of the diagonals of the parallelogram **PQRS** whose vertices are P(4,2,-6), Q(5,-3,1), R(12,4,5) and S(11,9,-2). Use these equations to find the point of intersection of diagonals.
- 8. A line l passes through point (-1,3,-2) and is perpendicular to both the lines $\frac{x}{1} = \frac{y}{2} = \frac{z}{3}$ and $\frac{x+2}{-3} = \frac{y-1}{2} = \frac{z+1}{5}$. Find the ctor equation of the line l. Hence, obtain its distance from origin.
